

Assembly Instructions

Parts List:

- #1 Dustpan
- #2 Rods
- #3 Vinyl Tube Connector
- #4 Cube Tool
- #5 Push-On Rings
- #6 Vinyl Caps

- 1** Insert the two rod ends (without Rings) into #3 Vinyl Tube Connector. Leave a small gap at the midpoint. See Image (#A).

- 2** Insert the ends of the rods through the raised corner holes of the dustpan. Set #4 Cube Tool on a flat surface, raised side down. Insert #5 Push-On Ring (crown side down #5a) into top round hole of Cube Tool. Push one rod end through #5 Ring in Cube Tool until Ring is snug against the underside of the Dustpan. Repeat with other rod at opposite end of Dustpan. Cover rod ends with #6 Vinyl Caps.

- 3** Grasp bag at each side of opening. Fan down with rapid movement filling bag with air (#B). Lay the bag down on a flat surface. Lift top side of bag opening and place the dustpan 2-3 inches inside the bag (rounded corners inward). With your thumb shielding the vinyl tube connector, press the arch down and tilt it into the bag (#C1) until your thumb no longer feels pressure between the arch and the bag. While still shielding the connector with your thumb, pull the arch toward you (#C2) until the arch is 2-3 inches from the edge of the bag and release. Make sure the Vinyl Caps on the underside of the dustpan engage the bag behind the drawstring. Make minor adjustments as needed.

Hold your BagJaw steady by pressing your foot down on one side of the dustpan. Rake "n" Sweep using a 16" wide or less rake or broom. You can lift and move your bag from the top of the arch. Empty your bag of weeds, leaves and clippings into your Green Bin or Compost Pile. Reuse your bag numerous times. Holes will develop and are expected. Rotating the bag around the frame will extend the useful life of your trash bag. BagJaw works best with standard 2 ft 9 inch width and 1 to 2 mil thick drawstring trash bags.
